INSTALLATION & PRICING

Grout Joint Recommendation
As needed depending on type of installation.

CONDITIONS OF PURCHASE

Natural stone products inherently lack uniformity and are subject to variation in aesthetics (color, shade, finish, etc.) and performance (hardness, strength, slip resistance, etc.). Natural stone products do not meet minimum coefficient of friction thresholds recommended by safety standard setting organizations. No warranties, express or implied, relative to merchantability or fitness for a particular purpose are made regarding the natural stone products distributed by American Olean. Check local building codes prior to specification or installation to verify that product technical characteristics comply with required parameters.

For additional information refer to "Factors to Consider" at: [www.americanolean.com/CommercialFactors](http://www.americanolean.com/CommercialFactors)

Water, oil, grease etc. create slippery conditions. Floor applications with exposure to these conditions require extra caution in product selection.

Not for use on ramps.

Note: Polished surfaces are not recommended for floor areas where slip resistance is a concern.

Shade Variations and Aesthetic Classification

**Low:** Background color is relatively uniform.

**Medium:** Background color contains slight variation.

**High:** Background color contains distinct variation.

**Random:** Variegated in color and veining. Blending allowances during installation are strongly recommended.

Soundness:

**Group A:** Sound Stones with no geological voids or fissures. These stones do not require any filling or patching.

**Group B:** Similar to Group A, but geological imperfections could be evident. These stones may contain holes or voids, which are filled with epoxy or resin.

**Group C:** These stones may contain holes, voids, lines of separation and structural flaws. It is standard practice to repair these stones by filling them or reinforcing them.

**Group D:** Similar to Group C but these stones contain larger natural faults and require more refinishing over time.

Special Notes:

■ Not recommended for wet areas.

◆ Can be used in interior wet areas, if sealed and maintained properly. If not properly maintained, the stone look could be altered. Please contact your sealer manufacturer or your American Olean sales representative for information about products that can protect the stone from moisture exposure

▼ Might contain dry seams, pits, fossils and glass veins that are filled at the factory or during installation. These are all inherent characteristics of the stone. Since these voids can sometimes lose their fillings, they should be refilled as part of normal maintenance.

● A sealer is recommended. (Note: Some limestone and tumbled stone should be sealed prior to grouting.).

\* White thin-set or mortar is recommended.
